

# Holstein Sires

April 2024

**ICC**<sup>™</sup>

**Empowering tomorrow's  
cows to perform.**

ICC<sup>™</sup> formula updated to better meet your needs!  
More details inside.

**GENEX**<sup>™</sup>  
FOR GENERATIONS

**Empowering tomorrow's cows to perform.**

ICC™ is a true legacy index that has helped producers like you build their next generation over the past decade. New this April is an update to the formula, reflecting our commitment to ensuring you and your future herd is covered.

With the April 2024 update, the ICC™ formula was simplified and refocused to emphasize sustainability and create even more efficient, productive and problem-free cows. Additional emphasis was placed on Fat, Protein and Productive Life.

### **How does ICC™ compare to other indexes?**

#### **ICC™**

Well-rounded index focused on traits that produce a sustainable cow.

- + Production Efficiency
- + Health and Sustainability
- + Fertility

#### **TPI®**

Selection on TPI® will create a larger, less feed-efficient cow with less focus on cow health, longevity and reproduction.

#### **NM\$**

Selection on NM\$ puts greater emphasis on Fat but less on cow longevity, health and reproduction.

Scan to learn more about the changes to ICC™.

# Terminology

## ICC

**ICC for Holsteins** is the combination of three sub-indexes: 60% Production Efficiency (PREF), 27% Sustainability (SUST) and 13% Fertility (FERT).

**ICC for Jerseys** and Mixed Breed sires is the combination of three sub-indexes: 46% Cheese Maximizer (ChMAX), 36% Sustainability (SUST) and 18% Fertility (FERT).

## Lifetime Net Merit \$ (NM\$)

Calculated by the Council on Dairy Cattle Breeding (CDCB) and measures net profit over the lifetime of a bull's average daughter.

## Lifetime Cheese Merit \$ (CM\$)

Designed for producers who sell milk in a cheese market and value high protein premiums. Calculated by the CDCB and combines the same traits as the NM\$ index.

## Reliability (Rel)

A measure of the amount of information in a trait. Reliability is expressed as a percentage, ranging from 1 to 99. The closer the reliability is to 99, the more reliable the proof.

## Daughters

The number of daughters included in the bull's milk proof.

## Herds

The number of different herds a bull's daughters are located in (considering daughters which are included in the bull's milk proof).

## PTA Milk

Predicted Transmitting Ability (PTA) for milk production in pounds, reflecting the expected milk production of future mature daughters.

## PTA Fat Pounds

PTA for butterfat in pounds, reflecting the expected butterfat production of future mature daughters.

## PTA Fat Percent

Indicates the genetic variance of a bull's PTA for transmitting fat as being positive or negative.

## PTA Protein Pounds

PTA for protein production in pounds, reflecting the expected production of future mature daughters.

## PTA Protein Percent

Indicates the genetic variance of a bull's PTA for transmitting protein as being positive or negative.

## Combined Fat and Protein (CFP)

The sum of PTA Fat pounds and PTA Protein pounds.

## PTA Feed Saved (FSAV)

Represents the expected pounds of feed saved per lactation based on Body Weight Composite and Residual Feed Intake evaluations. Larger, positive values are more favorable.

## RobotX™

GENEX composite value focused on genetics for easy milking. A value of 100 is considered average with higher numbers being more desirable.

## PTA Productive Life

A measure of the expected longevity of a bull's average daughters, measured in months.

## Daughter Pregnancy Rate (DPR)

Percentage of nonpregnant cows that become pregnant during each 21-day period. A DPR of 1.0 implies daughters from this bull are 1.0% more

likely to become pregnant during that estrous cycle than a bull with an evaluation at zero.

## PTA Somatic Cell Score (SCS)

The PTA for SCS is used to improve mastitis resistance. Bulls with lower SCS values are expected to have daughters with better mastitis resistance.

## PTA Livability (LIV)

Predicts cow's transmitting ability to remain alive while in the milking herd.

## PTA Heifer Livability (H. LIV)

The expected livability percentage of a bull's female offspring from 2 days after birth up to 18 months of age in a herd with average management conditions. Larger, positive values are more favorable.

## PTA Gestation Length (GL)

Shows the influence each service sire is expected to have on the number of days his mates carry their calves during pregnancy.

## PTA Type (PTAT)

An estimate of the genetic superiority for conformation that a bull will transmit to its offspring.

## Udder Composite (UDC)

An index calculated by Holstein Association USA that is a measure of a bull's ability for udder improvement.

## Feet and Legs Composite (FLC)

An index calculated by Holstein Association USA that is a measure of a bull's ability for foot and leg improvement.

## TPI® (Total Performance Index®)

A breed index calculated by Holstein Association USA.

## Jersey Performance Index™ (JPI™ or URPI)

A breed index calculated by the American Jersey Cattle Association (AJCA).

## Jersey Udder Index™ (JUI™ or URUI)

An index based on ability for udder improvement, calculated by the AJCA.

## Sire Calving Ease

Percentage of Estimated Difficult Births in Heifers (EDBH) when they calve for the first time.

## Daughter Calving Ease

Tendency of daughters of a particular sire to have more (or fewer) problems at calving than an average cow.

## Service Sire Stillbirth

Measures the tendency of heifers (sired by a particular service sire) to have stillborn calves when the heifer calves for the first time. Expressed as percent stillbirths, where stillborn calves are those scored as dead at birth or born alive but died within 48 hours of birth.

## Daughter Stillbirth

Measures the ability of a particular cow (daughter) to produce live calves.

## Early First Calving (EFC)

Defined as age in days at first calving. Animals expected to transmit genetics that decrease the age at first calving have a positive EFC value, because calving younger is seen as more beneficial.

## Sire Fertility (SCR)

Sire Conception Rate or SCR is the difference of the conception rate of a sire expressed as a percent comparison. SCR is based on conception rate and includes data on multiple services per lactation (up to 7). A SCR of +1.2 means the bull is 1.2% above averages.

## Heifer Conception Rate (HCR)

Percentage of inseminated virgin heifers that become pregnant. A bull with an evaluation of 1.0 would have daughters that as heifers would be 1% more likely to become pregnant. Services are only included if the heifer is at least 12 months old and less than 2.2 years.

## Cow Conception Rate (CCR)

Lactating cow's ability to conceive based on the percentage of cows inseminated that become pregnant. If a bull's CCR is 1.0, his daughters would be 1% more likely to become pregnant during that lactation than a bull with an evaluation of zero.

## Zoetis Wellness Indexes

Dairy Wellness Profit Index® (DWP\$®), Wellness Trait Index™ (WT\$™) and Calf Wellness Index™ (CW\$™) are sourced from Zoetis.

## Beta-Casein

A major casein protein making up 30% of total milk protein. Variations include A1A1, A1A2, A2A2.

## Kappa-Casein (cheese production)

Variants A, B and E are associated with milk protein and quality. Variant combinations are related to the processing of cheese.

## Linear Type Traits

Genetic evaluations for the 18 linear type traits are expressed as Standard Transmitting Abilities (STAs).

## Genetic Base

The genetic base for the evaluations is PTA 20, representing the average of cows born in 2015.

## Find More Traits on the GENEX Dairy Bull Search App!

- PregCheck™ fertility rankings: GENEX fertility rankings for conventional semen. Updated monthly. Higher numbers are more desirable.
- PregCheck+™ fertility rankings: GENEX fertility rankings for GenChoice™ sexed semen. Updated monthly. Higher numbers are more desirable.
- CDCB health traits: Six health traits presented as percent of disease resistance. Positive values indicate greater resistance than breed average.
- CDN functional traits: Five functional traits set to a 100 average with higher numbers being more desirable

# Technology for her future and yours

## Decision of the year!

"HerdMonitor® takes the guesswork out of those trips to the barn and allows us the opportunity to focus on animals that need our attention, saving not only time and money but also potentially saving the life of one of our animals. Well worth the investment!"

Jen McCormick, McCormick Family Dairy LLC, New York
