Holstein Sires

April 2026

ICC™

Your herd is part of your legacy.
Build accordingly.

See page 2 to learn more.

GENEX™
FOR GENERATIONS

You're not just managing a herd.

You are building one.

The sires you choose, the genetics you prioritize and the matings you make all add up. You see the results in your calves, your cows and your milk tank. You see it in how your herd performs, how long they last and how well they fit your operation. Those results are not random. They reflect how your genetic decisions align with the kind of cows you need and want.

In genetics, the goal is to create the most profitable cows for your operation - cows that breed back reliably, stay healthy, convert feed efficiently and keep producing lactation after lactation. The GENEX ICC™ indexes give you a framework to build that kind of cow, helping you balance production, fertility, health, longevity and efficiency based on what matters most in your operation.

Four Index Options, From One Foundation

The ICC™ index was built on a foundation of balanced genetics for commercial profitability. Today, that foundation extends into four distinct ICC™ indexes, each with a slightly different emphasis. This gives you choices and helps you better align your genetic strategy with your milk market, your herd's genetic strengths and gaps, and your long-term priorities.

The indexes have been shaped with producer-driven feedback to reflect the practical needs of real herds, and each one has been validated on 45,000 genomic-tested cows in progressive herds to ensure predicted genetic responses match real-world results.

Learn more about each of these ICC™ indexes on the following pages.

ICC™ Ultimate

Built for balanced genetics.

ICC™ Milk

Built to maximize lifetime milk.

ICC™ Health

Built with a health and fertility emphasis.

ICC™ Efficiency

Built to boost efficiency and save on input costs.

Your herd is part of your legacy.
Build accordingly.

ICC™ Ultimate

ULTIMATE

Formerly the ICC™ index, now **ICC™ Ultimate.**
Formula updated to reflect a more 1:1 Fat to Protein ratio.

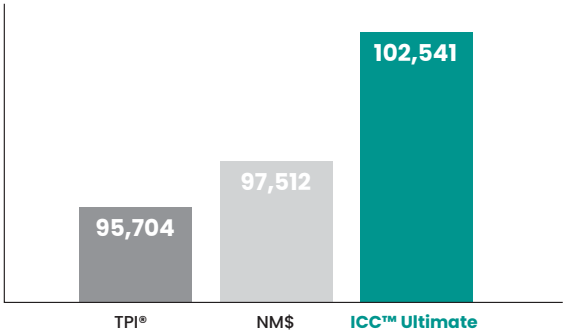

Built to balance lifetime ECM, health, repro & efficiency.

With the ICC™ Ultimate index, balance isn't a compromise. It's a strategy. It's purpose-built for genetic progress across health, fertility, longevity and efficiency, while driving stronger lifetime energy-corrected milk (ECM) than other indexes (Graph 1).

That balanced progress also shows up in better health, with lower somatic cell counts and fewer mastitis and metritis events - creating cows that stay healthy and productive longer. At the same time, stronger female fertility means fewer breedings and more cows reaching 4th lactation on time.

The result is profitability from every angle: more lifetime ECM, lower health costs, lower breeding costs and greater longevity. That's the ICC™ Ultimate index strategy at work.

ICC™ Milk

NEW!

MILK

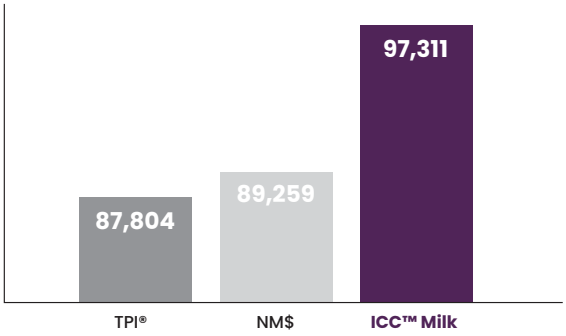

Built to maximize lifetime milk.

The ICC™ Milk index outpaces other selection indexes in pounds of milk produced over a cow's lifetime (Graph 2), making it the index of choice if you are in a fluid milk market.

But more milk doesn't have to mean less of everything else. The ICC™ Milk index maintains strong performance for health traits that keep your herd running smoothly. That balance extends to fertility too, with cows requiring fewer breedings, with more reaching 4th lactation on schedule - meaning the cows built to produce more are also built to stay in the herd long enough to deliver on that promise.

Overall, the result is a herd that puts more milk in the tank over a lifetime, without sacrificing the health, fertility and longevity that make it sustainable.

**This analysis uses a validation dataset of 45,000 genotyped cows with complete lifetime performance records. For each index, cows were ranked by their genomic index value and the top 25% (top quartile) were identified. The bars represent the average actual production of the top quartile of cows for each index.*

ICC™ Health

NEW!

HEALTH

Built with a health and fertility emphasis.

The ICC™ Health index helps you get ahead of the health challenges that quietly erode profitability. Greater emphasis on Somatic Cell Score, Mastitis and longevity results in cows with fewer transition issues, lower SCC and stronger udder health (Table 1). In other words, it creates cows that stay healthier and require less intervention.

These healthier cows don't just last longer; they also stay on schedule. With fewer health setbacks, cows breed back more efficiently and reach later lactations sooner – where lifetime value is truly built.

The ICC™ Health index delivers this health advantage without sacrificing production. Built on the balanced ICC™ framework, it creates herds where health, fertility and production work together to drive long-term profitability.

Table 1. Top Quartile Average Per Index for Health & Production*

	TPI®	NM$	ICC™ Health
Mastitis Event %	9.03	9.75	7.9

ICC™ Efficiency

NEW!

EFFICIENCY

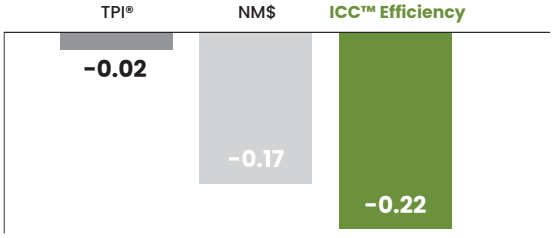

Built to boost efficiency and save on input costs.

ICC™ Efficiency is a forward-thinking index built for dairies that want to produce more while spending less to do it. Greater emphasis on Residual Feed Intake (RFI) targets cows that convert feed into milk more efficiently, helping reduce feed costs and support more sustainable use of resources.

However, choosing efficiency doesn't mean sacrificing production. The ICC™ Efficiency index outpaces TPI® and NM$ for lifetime ECM, driven by stronger longevity and livability. In other words, cows that stay in the herd longer and breed back consistently are simply more efficient.

Built on the ICC™ foundation of balanced cows, the ICC™ Efficiency index creates cows that make inputs go further: converting feed more efficiently, requiring fewer replacements and delivering the longevity that drives long-term profitability.

Graph 3. Expected Selection Response for Residual Feed Intake

A negative RFI means animals eat less than expected. A larger negative genetic selection response indicates genetics are driving animals to need less feed to produce the same amount of milk.

Turn data into performance
with insights you can act on.

HerdMonitor™

Powered by nedap

High-performing herds don't guess. They monitor. The **GENEX HerdMonitor™ cow monitoring system** gives you real-time heat and health insights, while the **SmartSort sorting gate** automatically separates cows based on those insights – without locking up whole pens or disrupting cow flow.

Insight wins the game.
Execution secures the victory.

Contact your local GENEX representative today or visit www.genex.coop/herdmonitor.

What Will Your Herd's Genetic Progress Report Reveal?

The GENEX DairySuite™ precision genetics program gives you a clear, visual snapshot of what's happening inside your herd's genetics program. The GENEX DairySuite™ genetic audit reveals if your herd is trending in the direction you intend – or if bull choices and current pregnancies tell a different story.

Performed by your GENEX representative, the DairySuite™ genetic audit highlights:

- Strengths, weaknesses and hidden genetic trends
- Whether your bull choices match your goals
- Which traits are improving and which need attention
- How your herd compares to industry standards

Don't settle for average genetic progress.
Know where you stand – and how to get ahead.

Ask your GENEX representative for a DairySuite™ genetic audit today.

DairySuite™
Precision Genetics

Less Drama for Mama

with RumiLife® CAL24™ nutritional supplement

Calving doesn't have to mean stress, setbacks or scrambling to get your fresh cows back on track. When calcium demands surge, RumiLife® CAL24™ nutritional supplement meets them head-on. Designed for simplicity and optimal fresh cow health, this on-farm essential delivers fast-acting, long-lasting calcium support in a two-bolus system that fits seamlessly into your routine.

Without RumiLife® CAL24™

- Down cows
- Delayed recovery
- More health events
- Increased costs, lower returns
- ***Calving chaos***

With RumiLife® CAL24™

- Smooth transitions with full calcium coverage
- Increased performance & productivity
- Fewer health events
- Peace of mind
- **Less drama for mama**

RumiLife® CAL24™ nutritional supplement is calcium that works smarter and longer, targeted to support the cow when she's most vulnerable. It delivers complete calcium coverage and supports cow health from the moment she freshens.

Two boluses. One smooth start to lactation.

GENEX™

Terminology

GENEX ICC™ Indexes
ICC™ Ultimate: Balanced genetic index optimizing health, fertility, longevity, and efficiency while maximizing lifetime energy-corrected milk.

ICC™ Milk: Balanced genetic index with emphasis on lifetime milk production for fluid markets.

ICC™ Health: Balanced genetic index emphasizing cow health to maximize lifetime days in milk and reduce health events.

ICC™ Efficiency: Balanced genetic index with added emphasis on efficient feed conversion into milk.

Lifetime Net Merit $ (NM$)
Calculated by the Council on Dairy Cattle Breeding (CDCB) and measures net profit over the lifetime of a bull's average daughter.

Lifetime Cheese Merit $ (CM$)
Designed for producers who sell milk in a cheese market and value high protein premiums. Calculated by the CDCB and combines the same traits as the NM$ index.

Reliability (Rel)
A measure of the amount of information in a trait. Reliability is expressed as a percentage, ranging from 1 to 99. The closer the reliability is to 99, the more reliable the proof.

PTA Milk
Predicted Transmitting Ability (PTA) for milk production in pounds, reflecting the expected milk production of future mature daughters.

PTA Protein Pounds
PTA for protein production in pounds, reflecting the expected production of future mature daughters.

PTA Protein Percent
Indicates the genetic variance of a bull's PTA for transmitting protein as being positive or negative.

PTA Fat Pounds
PTA for butterfat in pounds, reflecting the expected butterfat production of future mature daughters.

PTA Fat Percent
Indicates the genetic variance of a bull's PTA for transmitting fat as being positive or negative.

Combined Fat and Protein (CFP)
The sum of PTA Fat pounds and PTA Protein pounds.

PTA Feed Saved (FSAV)
Represents the expected pounds of feed saved per lactation based on Body Weight Composite and Residual Feed Intake evaluations. Larger, positive values are more favorable.

RobotX™
GENEX composite value focused on genetics for easy milking. A value of 100 is considered average with higher numbers being more desirable.

PTA Productive Life
A measure of the expected longevity of a bull's average daughters, measured in months.

PTA Livability (LIV)
Predicts cow's transmitting ability to remain alive while in the milking herd.

PTA Heifer Livability (HLIV)
The expected livability percentage of a bull's female offspring from 2 days after birth up to 18 months of age in a herd with average management conditions. Larger, positive values are more favorable.

PTA Somatic Cell Score (SCS)
The PTA for SCS is used to improve mastitis resistance. Bulls with lower SCS values are expected to have daughters with better mastitis resistance.

Daughter Pregnancy Rate (DPR)
Percentage of nonpregnant cows that become pregnant during each 21-day period. A DPR of 1.0 implies daughters from this bull are 1.0% more likely to become pregnant during that estrous cycle than a bull with an evaluation at zero.

Cow Conception Rate (CCR)
Lactating cow's ability to conceive based on the percentage of cows inseminated that become pregnant. If a bull's CCR is 1.0, his daughters would be 1% more likely to become pregnant during that lactation than a bull with an evaluation of zero.

Heifer Conception Rate (HCR)
Percentage of inseminated virgin heifers that become pregnant. A bull with an evaluation of 1.0 would have daughters that as heifers would be 1% more likely to become pregnant. Services are only included if the heifer is at least 12 months old and less than 2.2 years.

Modern Udder Index (MUI)
MUI, calculated by PEAK from Holstein type traits, is a modern strategy to breed for modern udders. MUI promotes lifetime production and longevity without making larger cows. MUI effectively yields a "happy medium" for parlor traits like teat placement and length, maintains center support while delivering steady progress in fore and rear udders.

PTA Type (PTAT)
An estimate of the genetic superiority for conformation that a bull will transmit to its offspring.

Udder Composite (UDC)
An index calculated by Holstein Association USA that is a measure of a bull's ability for udder improvement.

Feet and Legs Composite (FLC)
An index calculated by Holstein Association USA that is a measure of a bull's ability for foot and leg improvement.

TPI® (Total Performance Index®)
A breed index calculated by Holstein Association USA.

Sire Calving Ease (SCE)
Percentage of Estimated Difficult Births in Heifers (EDBH) when they calve for the first time.

Zoetis Wellness Indexes
Dairy Wellness Profit Index® (DWP$®), Wellness Trait Index™ (WT$™) and Calf Wellness Index™ (CW$™) are sourced from Zoetis.

PregCheck™ Fertility Rankings
PregCheck™ rankings are a GENEX evaluation of an individual sire's frozen semen conception rate and are based on actual breeding and pregnancy data. The ranking is set to a base of 100, with numbers 100 or above being more favorable.

PregCheck+™ Fertility Rankings
PregCheck+™ rankings are a GENEX evaluation of the conception ability of a bull's GenChoice™ sexed semen. The ranking is set to a base of 100, with numbers 100 or above being more favorable.

Sire Fertility (SCR)
Sire Conception Rate or SCR is the difference of the conception rate of a sire expressed as a percent comparison. SCR is based on conception rate and includes data on multiple services per lactation (up to 7). A SCR of +1.2 means the bull is 1.2% above averages.

Beta-Casein
A major casein protein making up 30% of total milk protein. Variations include A1A1, A1A2, A2A2.

Kappa-Casein (cheese production)
Variants A, B and E are associated with milk protein and quality. Variant combinations are related to the processing of cheese.

Linear Type Traits
Genetic evaluations for the 18 linear type traits are expressed as Standard Transmitting Abilities (STAs).

Genetic Base
The genetic base for the evaluations represents the average of cows born in 2020.

For additional genetic information, visit catalog.genex.coop/us/dairy or download the GENEX Dairy Bull Search App.

The genetic evaluations contained within this report, unless otherwise noted, are provided by the Council on Dairy Cattle Breeding as the steward of the National Cooperator Database. The National Cooperator Database houses producer-owned yield, management, ancestry, type, and genotype data for the use in genetic evaluations and independent research. Data included in the National Cooperator Database is submitted through certified organizations for data quality and integrity. As such, individual traits - along with Lifetime Net Merit $, Cheese Merit $, Fluid Merit $, and Grazing Merit $ – are Powered by CDCB, unless otherwise noted such as Holstein type traits.

POWERED BY CDCB™

Make Every Day Girls' Day

with GenChoice™ Sexed Semen

More heifers. More certainty.

GenChoice™ sexed semen delivers the heifer calves you need – backed by reliable fertility performance and data-driven insights that help you make smarter breeding decisions.

Data you can trust
Built on real breeding and pregnancy results.

Fertility that performs
Proven results backed by industry-leading quality.

Plan with confidence
Make smarter breeding decisions when every heifer counts.

PregCheck+™ Fertility Rankings

A simple, data-backed way to compare semen fertility.
Higher rankings indicate improved conception performance.

95	96	97	98	99	**100**	101	102	103	104	105

Below Average — Above Average

Based on real breeding data. Built for real-world results.

MAKE EVERY DAY Girls' Day GenChoice

Every breeding counts.

Use GenChoice™ sexed semen and leverage PregCheck+™ rankings for proven fertility.
