Breed for What Matters

How to build cows that produce, breed back and stay. - *Page 2*

Fertility Updates

Explore the latest CDCB updates and the new FSC trait. - *Page 74*

GENEX™
FOR GENERATIONS

Build the Herd **that Fits Your Future**

Profitability can come from many places: maximum milk, a healthier herd, greater efficiency or all-around balanced cows. The key is selecting genetics that reflect the **outcomes** that matter most to you and your operation.

That's why the GENEX ICC™ index family gives you four ways to build towards those goals:

- Four index options with different areas of emphasis
- A balanced genetic foundation across every option
- Different paths toward greater lifetime production and profitability

That's flexibility to align your genetic strategy with your milk market, your herd's strengths and weaknesses, and your management priorities.

Whether you're building for greater profitability through more energy-corrected (ECM), more fluid milk, stronger health or improved efficiency, there's an ICC index designed to help you get there.

Your herd is part of your legacy.
Build accordingly.

Which outcomes matter most to your operation?
Explore the four ICC indexes on the facing page. Discover current index leaders on page 4.

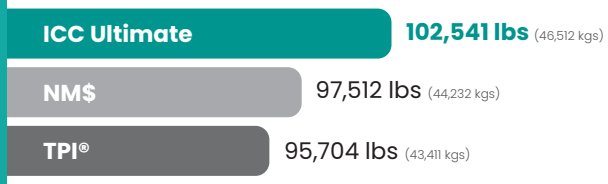

Build for Balanced Profitability

The most profitable cows are complete cows that produce more energy-corrected milk (ECM), stay healthy, breed back and last. The ICC Ultimate index balances traits that drive long-term profitability, creating cows that deliver more lifetime value.

5,029+ lbs

MORE

Lifetime ECM*

Balanced cows stay productive longer and deliver more profit over a lifetime.

ICC™ Ultimate

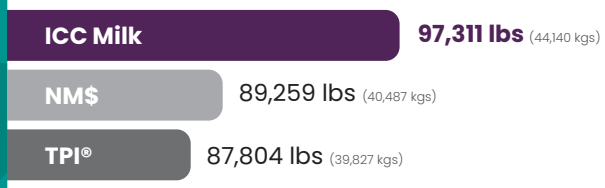

Build for Maximum Lifetime Milk

High production only matters if cows stay in the herd long enough to deliver it. The ICC Milk index prioritizes genetics that maximize lifetime fluid milk while maintaining the fertility, health and longevity needed for sustainable performance.

8,052+ lbs

MORE

Lifetime Milk*

ICC™ Milk

Because every additional kilogram shipped matters to your bottom line.

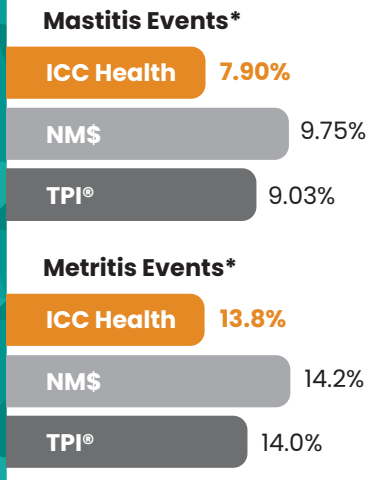

Building for Healthier, Longer-Lasting Cows

Health challenges impact farm profitability through labor demands, treatment costs and lost opportunities. The ICC Health index emphasizes genetics for healthy, low-maintenance cows that stay productive with fewer setbacks.

FEWER

HEALTH

Events

Healthier cows remain productive reaching the lactations where lifetime value is built.

ICC™ Health

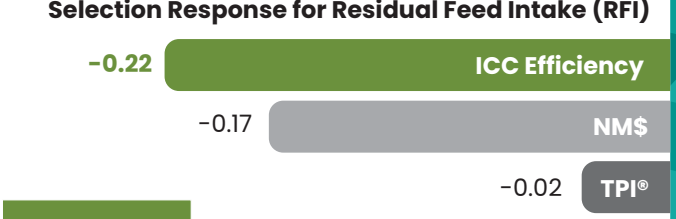

Build for Greater Efficiency

Feed and input costs influence profitability, making efficiency increasingly important. The ICC Efficiency index creates cows that make more use of resources while maintaining the balanced traits required for long-term success.

MORE

MILK

From Less Feed

ICC™ Efficiency

Larger negative RFI = less feed required for the same milk production.

Because the most efficient cows create more output from every unit of feed consumed.

*Validated using data from more than 45,000 genomic-tested commercial cows. Results compare actual production of the top quartile of cows ranked by the ICC index, NM$ and TPI.

Make Every Day Girls' Day

with GenChoice™ Sexed Semen

More heifers. More certainty.

GenChoice™ sexed semen delivers the heifer calves you need – backed by reliable fertility performance and data-driven insights that help you make smarter breeding decisions.

Data you can trust
Built on real breeding and pregnancy results.

Fertility that performs
Proven results backed by industry-leading quality.

Plan with confidence
Make smarter breeding decisions when every heifer counts.

PregCheck+™ Fertility Rankings

A simple, data-backed way to compare semen fertility.
Higher rankings indicate improved conception performance.

Female Reproductive Performance Traits

Updated for Better Genetic Selection

Advances in reproductive management have changed how dairy herds achieve pregnancies. Effective with the August 2026 sire summary, the updated CDCB fertility evaluations better separate genetics from management, giving you more accurate fertility evaluations to support informed sire selection decisions.

These revisions, plus the introduction of an all-new trait, First Service to Conception (FSC), provide a more complete picture of genetic fertility than ever before.

Why were these traits updated?

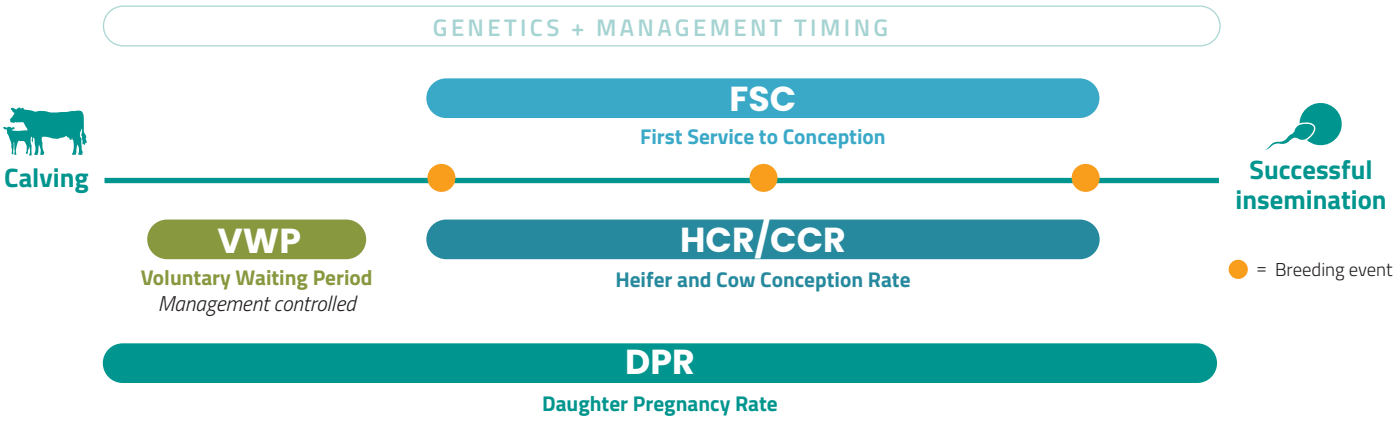

Modern management
Heat detection systems, synchronization, sexed semen and implementing beef-on-dairy breedings into herd inventory strategies changed reproductive management.

Better genetic accuracy
Updated evaluations more effectively separate genetics from management.

Better selection decisions
More accurately identify bulls with genetics to improve female reproductive performance.

More stable evaluations
Updated calculations improve the consistency of fertility evaluations over time, particularly for younger genomic bulls.

Each fertility trait evaluates a different stage of the reproductive cycle, helping you match sire selection to your herd's reproductive goals.

Daughter Pregnancy Rate (DPR)

Evaluates
Percentage of non-pregnant cows that will become pregnant in each 21-day cycle.

What changed?
The 2026 revision changes the VWP used in the calculation from a fixed 50-day VWP with a 20-day grace period to herd-level and lactation group-specific values. Now includes data edits so that daughters are not accounted for until they reach 36 months of age.

Ideal for
Improving overall female fertility and pregnancy success across multiple breedings.

Why it matters
Improves overall herd reproductive performance and reduces days open.

Heifer Conception Rate (HCR)

Evaluates
A maiden heifer's ability to conceive.

What changed?
The 2026 revision updates the model to account for service sire breed, mating type and short cycling (an insemination that takes place 10 to 17 days after the previous insemination).

Ideal for
Improving conception success in replacement heifers.

Why it matters
Supports timely age at first calving and lowers breeding costs.

Cow Conception Rate (CCR)

Evaluates
A lactating cow's ability to conceive.

What changed?
The 2026 revision accounts for service sire breed, mating type and short cycling, and includes data edits so that daughters are not accounted for until they reach 36 months of age.

Ideal for
Improving conception success in lactating cows.

Why it matters
Helps reduce repeat breedings and improve reproductive efficiency.

Early First Calving (EFC)

Evaluates
An animal's ability to alter their daughters' age at first calving.

What changed?
The 2026 revision moves the calculation to a single-trait model.

Ideal for
Getting genetically superior heifers into production sooner.

Why it matters
Reduces raising costs and gets heifers into production sooner.

NEW

First Service to Conception (FSC)

Evaluates
A lactating cow's ability to conceive after her first insemination, expressed in days.

Ideal for
Maximizing reproduction efficiency once cows are beyond the herd's VWP.

Why it matters
Complements DPR and CCR by evaluating days to conception after first service independently of VWP.

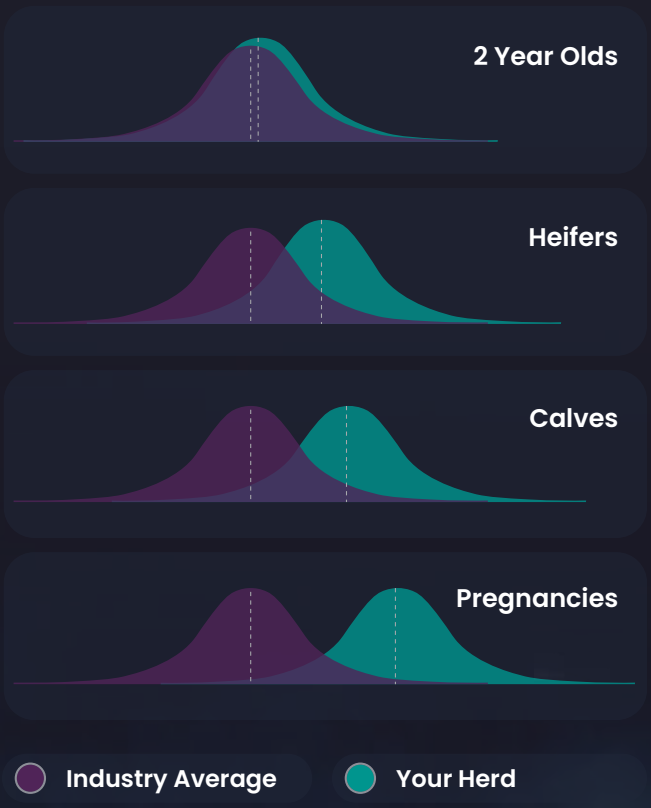

Choose the trait(s) that match your breeding goal.

If your goal is to ...		Prioritize
Improve days open	→	**DPR**
Improve heifer fertility	→	**HCR**
Improve fertility in lactating cows	→	**CCR**
Reduce age at first calving	→	**EFC**
Minimize days to conception	→	**FSC** *(NEW)*

What Will Your Herd's Genetic Progress Report Reveal?

The GENEX DairySuite™ precision genetics program gives you a clear, visual snapshot of what's happening inside your herd's genetics program. The GENEX DairySuite™ genetic audit reveals if your herd is trending in the direction you intend – or if bull choices and current pregnancies tell a different story.

Performed by your GENEX representative, the DairySuite™ genetic audit highlights:

- Strengths, weaknesses and hidden genetic trends
- Whether your bull choices match your goals
- Which traits are improving and which need attention
- How your herd compares to industry standards

Don't settle for average genetic progress.
Know where you stand - and how to get ahead.

Ask your GENEX representative for a DairySuite™ genetic audit today.

DairySuite™
Precision Genetics

Terminology

GENEX ICC™ Indexes
ICC Ultimate: Balanced genetic index optimizing health, fertility, longevity, and efficiency while maximizing lifetime energy-corrected milk.

ICC Milk: Balanced genetic index with emphasis on lifetime milk production for fluid markets.

ICC Health: Balanced genetic index emphasizing cow health to maximize lifetime days in milk and reduce health events.

ICC Efficiency: Balanced genetic index with added emphasis on efficient feed conversion into milk.

Lifetime Net Merit $ (NM$)
Measures net profit over the lifetime of a bull's average daughter.

Lifetime Cheese Merit $ (CM$)
Designed for producers who sell milk in a cheese market and value high protein premiums. Combines the same traits as the NM$ index.

TPI® (Total Performance Index®)
A breed index calculated by Holstein Association USA.

Milk
Predicted Transmitting Ability (PTA) for milk production in pounds, reflecting the expected milk production of future mature daughters.

Reliability (Rel)
A measure of the amount of information in a trait. Reliability is expressed as a percentage, ranging from 1 to 99. The closer the reliability is to 99, the more reliable the proof.

Protein Pounds
PTA for protein production in pounds, reflecting the expected production of future mature daughters.

Protein Percent
Indicates the genetic variance of a bull's PTA for transmitting protein as being positive or negative.

Fat Pounds
PTA for butterfat in pounds, reflecting the expected butterfat production of future mature daughters.

Fat Percent
Indicates the genetic variance of a bull's PTA for transmitting fat as being positive or negative.

Combined Fat and Protein (CFP)
The sum of PTA Fat pounds and PTA Protein pounds.

Feed Saved (FSAV)
Represents the expected pounds of feed saved per lactation based on Body Weight Composite and Residual Feed Intake evaluations. Larger, positive values are more favorable

RobotX™
GENEX composite value focused on genetics for easy milking. A value of 100 is considered average with higher numbers being more desirable.

Productive Life (PL)
A measure of the expected longevity of a bull's average daughters, measured in months.

Livability (LIV)
Predicts cow's transmitting ability to remain alive while in the milking herd.

Heifer Livability (HLIV)
The expected livability percentage of a bull's female offspring from 2 days after birth up to 18 months of age in a herd with average management conditions. Larger, positive values are more favorable.

Resistance to Diarrhea (DIA)
Predicts the expected resistance of an animal's offspring to calfhood diarrhea under average management conditions. Expressed as percentage points of resistance above or below the breed average.

Resistance to Respiratory Problems (RSP)
Predicts the expected resistance of an animal's offspring to calfhood respiratory problems under average management conditions. Expressed as percentage points of resistance above or below the breed average.

Somatic Cell Score (SCS)
The PTA for SCS is used to improve mastitis resistance. Bulls with lower SCS values are expected to have daughters with better mastitis resistance.

Mastitis (MAST)
Represents the expected resistance of an animal's offspring to clinical mastitis in a herd with average management conditions. PTAs below and above the breed average base are expressed in percentage points and larger, positive values are more favorable.

First Service to Conception (FSC)
Predicts the expected difference, in days, from first breeding to the breeding of conception in an animal's daughters relative to the breed base. Positive PTAs represent fewer days to conception.

Daughter Pregnancy Rate (DPR)
Percentage of nonpregnant cows that become pregnant during each 21-day period. A DPR of 1.0 implies daughters from this bull are 1.0% more likely to become pregnant during that estrous cycle than a bull with an evaluation at zero.

Cow Conception Rate (CCR)
Lactating cow's ability to conceive based on the percentage of cows inseminated that become pregnant. If a bull's CCR is 1.0, his daughters would be 1% more likely to become pregnant during that lactation than a bull with an evaluation of zero.

Heifer Conception Rate (HCR)
Percentage of inseminated virgin heifers that become pregnant. A bull with an evaluation of 1.0 would have daughters that as heifers would be 1% more likely to become pregnant. Services are only included if the heifer is at least 12 months old and less than 2.2 years.

Sire Calving Ease (SCE)
Percentage of Estimated Difficult Births in Heifers (EDBH) when they calve for the first time.

Modern Udder Index (MUI)
MUI, calculated by PEAK from Holstein type traits, is a modern strategy to breed for modern udders. MUI promotes lifetime production and longevity without making larger cows. MUI effectively yields a "happy medium" for parlor traits like teat placement and length, maintains center support while delivering steady progress in fore and rear udders.

PTA Type (PTAT)
An estimate of the genetic superiority for conformation that a bull will transmit to its offspring.

Holstein Conformation Composite (HCC)
A conformation selection tool by the Holstein Association USA that identifies the combination of all 18 linear traits associated with a moderate size, balanced, functional Holstein cow.

Udder Composite (UDC)
An index calculated by Holstein Association USA that is a measure of a bull's ability for udder improvement.

Feet and Legs Composite (FLC)
An index calculated by Holstein Association USA that is a measure of a bull's ability for foot and leg improvement.

Zoetis Wellness Indexes
Dairy Wellness Profit Index® (DWP$®), Dairy Wellness Profit Heat (DWP$ Heat), Wellness Trait Index™ (WT$™) and Calf Wellness Index™ (CW$™) are sourced from Zoetis.

PregCheck™ Fertility Rankings
PregCheck™ rankings are a GENEX evaluation of an individual sire's frozen semen conception rate and are based on actual breeding and pregnancy data. The ranking is set to a base of 100, with numbers 100 or above being more favorable.

PregCheck+™ Fertility Rankings
PregCheck+™ rankings are a GENEX evaluation of the conception ability of a bull's GenChoice™ sexed semen. The ranking is set to a base of 100, with numbers 100 or above being more favorable.

Sire Fertility (SCR)
Sire Conception Rate or SCR is the difference of the conception rate of a sire expressed as a percent comparison. SCR is based on conception rate and includes data on multiple services per lactation (up to 7). A SCR of +1.2 means the bull is 1.2% above averages.

Beta-Casein
A major casein protein making up 30% of total milk protein. Variations include A1A1, A1A2, A2A2.

Kappa-Casein (cheese production)
Variants A, B and E are associated with milk protein and quality. Variant combinations are related to the processing of cheese.

Linear Type Traits
Genetic evaluations for the 18 linear type traits are expressed as Standard Transmitting Abilities (STAs).

Genetic Base
The genetic base for the evaluations represents the average of cows born in 2020.

For additional genetic information, visit catalog.genex.coop/us/dairy or download the GENEX Dairy Bull Search App.

The genetic evaluations contained within this report, unless otherwise noted, are provided by the Council on Dairy Cattle Breeding as the steward of the National Cooperator Database. The National Cooperator Database houses producer-owned yield, management, ancestry, type, and genotype data for the use in genetic evaluations and independent research. Data included in the National Cooperator Database is submitted through certified organizations for data quality and integrity. As such, individual traits - along with Lifetime Net Merit $, Cheese Merit $, Fluid Merit $, and Grazing Merit $ – are Powered by CDCB, unless otherwise noted such as Holstein type traits.

For more information about evaluations Powered by CDCB and the industry collaboration that fuels them, visit **www.uscdcb.com/cdcb-marks**

POWERED BY CDCB™

High-performing herds don't guess.
They monitor.

HerdMonitor™

Powered by nedap

The **GENEX HerdMonitor™ cow monitoring system** delivers real-time heat and health insights 24/7, while the **SmartSort sorting gate** automatically separates cows based on those insights - without locking up whole pens or disrupting cow flow. Together, they connect data to maximize herd performance through one integrated system.

Monitor smarter. Sort automatically.
